

Oseni Ibrahim

Trading Bot Developer | MQL4 / MQL5 | MetaTrader 4 & 5 Automation

Nigeria (remote) | Email: oseniibrahim845@gmail.com

PROFILE

Trading bot developer (MQL5, MQL4, Python, JavaScript/Node.js) specialising in MetaTrader 4 and 5. I build, fix and extend Expert Advisors, indicators and trade-management tools, with a focus on the details that decide whether an EA behaves correctly on a live account: broker stop and freeze levels, filling modes, symbol suffixes, restart safety and risk limits. I take on freelance projects and subcontract work for studios and fintech teams, delivering commented source code to the client's specification.

CORE SERVICES

EA development	Custom MT4/MT5 Expert Advisors and indicators built from written rules or specifications
Conversion	MT4 to MT5 ports; TradingView (Pine Script) strategies to MQL5 with signal parity checks
Fixes & maintenance	Debugging, modifying and optimising existing EAs; keeping MT4 and MT5 builds in sync
Trade management	Multi-TP execution, partial closes, breakeven and trailing logic, signal update handling
Risk systems	Prop-firm style daily loss and drawdown guards, exposure limits, news pauses
Integrations	Telegram signal copiers and alerts, trade copiers, TradingView webhooks, broker/exchange APIs, Python bridges
Testing & deployment	Strategy Tester validation, backtesting tools, EA monitoring, VPS deployment

EXPERIENCE

Freelance Software & Automation Developer — self-employed (Fiverr and direct clients) Ongoing

- Trading automation: MT4/MT5 Expert Advisors, TradingView/Pine Script integrations, broker API integrations, copy-trading systems, crypto trading bots and custom trading dashboards.
- General development: APIs, AI agents, n8n automation workflows, WhatsApp/chatbot backends and custom web applications.

AI Automation Developer — Adpeako (remote, client contract) Jun 2026 – Sep 2026

- Built an AI automation system on n8n for the Adpeako team, delivered in phases and working inside their Slack, n8n and Google workspace.
- Work included AI content tooling and support for product-feed setup in Google Merchant Center; all contracted phases completed, with a follow-on AI personal-assistant project under discussion.

Developer — GetMarketing (getmarketing.team) 2026

- Worked on an AI marketing-strategy web app: Google sign-in, a guided strategy session that generates a custom marketing plan, and an in-app feedback system that routes user notes to the team by email; fixed user-reported access and feedback issues.

PROJECTS

Rappido — WhatsApp timesheet & attendance platform (Node.js, Express, PostgreSQL, WhatsApp API) May 2026

- Built a WhatsApp chatbot that lets field workers log daily hours, overtime, night/Sunday surcharges, work location and expenses through a guided menu, plus absence reports and corrections to earlier entries.
- Node.js/Express webhook backend with per-user conversation state in PostgreSQL, plus a supervisor dashboard to approve or reject entries, view weekly reports and charts, and export to CSV.

MT4/MT5 Trade Management Samples (MQL5, MQL4) 2026

github.com/oseniibrahim845-hue/mt4-mt5-trade-management-samples

- **Multi-TP Signal Manager (MQL5 + MQL4)**: one position per take-profit level, breakeven after TP1, trailing after TP2, MOVE_SL / CLOSE channel updates, a ticket map persisted to disk so terminal restarts never duplicate or lose trades, and stops/freeze-level checks before every modification. The same signal file format drives both platforms.
- **Daily Loss Guard (MQL5)**: prop-firm style daily loss and overall drawdown limits measured from the server-day start; flattens positions, removes pending orders and keeps the account flat for the rest of the day.

Code walkthroughs or a small paid trial task available on request. Delivered as commented source, tested in the Strategy Tester and on demo.

EDUCATION

Computer Science — Federal University of Technology, Akure (FUTA), Nigeria
